

The RouteViews Project: Update

Philip Paeps
philip@routeviews.org
TWNOG 6, Taipei
18 April 2025

Note to TWNOG PC

- The data slides and ‘RouteViews News’ slides are from November 2024. They will be updated with the most recent information available before the presentation.
- This can fit in 20–25 minutes. I can make this shorter though.

Background

- **RouteViews was first started in 1995**
- Now a growing network of 40+ collectors positioned strategically at Internet Exchange Points around the world
- RouteViews collaborates with the Center for Applied Internet Data Analysis (CAIDA) working with NSF grants that support Designing a Global Measurement Infrastructure to Improve Internet Security, GMI3S ([OAC-2131987](#)), and an Integrated Library for Advancing Network Data Science, ILANDS ([CNS-2120399](#)).
- RouteViews is supported with financial and in-kind donations by multiple organizations
- **RouteViews is based at the University of Oregon and operated by NSRC**
- NSRC supports the growth of global Internet infrastructure by providing engineering assistance, collaborative technical workshops, training, and other resources to university, research & education networks worldwide.
- NSRC is partially funded by the IRNC program of the NSF ([OAC-2029309](#)) and Google with other contributions from public and private organizations.
- The University of Oregon is a public research institution in Eugene, Oregon, USA founded in 1876.

What is RouteViews

- A tool that allows Internet network operators to look at the BGP table from different backbones and locations around the world to troubleshoot and to assess:
 - Reachability, hijacks, bugs, peer visibility, mass withdrawals, RPKI status,...
- Operators who find it a valuable tool also peer to contribute to the value
- RouteViews operates collectors strategically positioned at IXPs around the world.
 - It also hosts a few multi-hop collectors at UO for those operators who are not present at IXPs.

RouteViews Collector Map

<http://www.routeviews.org/routeviews/index.php/map/>

What's happening at RouteViews

ROUTEVIEWS NEWS

RouteViews News

- Collectors:
 - The majority use FRR¹ (either version 9.1 or 10)
 - One Cisco ASR1004 (as a tribute to the original!)
 - Moving collectors from metal to VMs (easier deployment & management)
- Location update:
 - Recent additions include KINX, CIX-ATL, PacWave LAX, Iraq IX, PIT Mexico & Santiago, DE-CIX Johor Bahru
 - Several new locations offered; resources required to fulfil those offers

¹FRRouting Project: <https://frrouting.org/>

UNIVERSITY OF OREGON

RouteViews Development Projects

- API
 - Allow programmatic access to live RouteViews data
 - (our collectors currently allow **telnet** access, which 1000s of automated scripts hammer on a daily basis)
- LookingGlass
 - **telnet** access is unsustainable
 - Aim to making LookingGlass default access for each collector
 - **telnet** available on one collector for legacy
- BMP
 - Live feed from collectors for BGP data consumers

UNIVERSITY OF OREGON

RouteViews Behind the Scenes Projects

Months of ongoing effort:

- Upgrading archive infrastructure and storage
 - RouteViews stores BGP data from 1997 – around 50 TBytes (compressed)
- Tooling
 - Automation tools for managing the whole infrastructure and deploying new peers
- Collector OS (from CentOS to Ubuntu)
 - CentOS end-of-life – half the collectors still running CentOS
- FRR performance
 - Standardising on two latest releases, upgrading from old releases
 - “Badly behaving peers” (aka slow peers)

UNIVERSITY OF OREGON

RouteViews Future Planning

- Collectors & hosts in new locations outside North America
 - Large IXPs with dense interconnection
 - Unique or specialist environments (e.g. R&E exchanges)
- Scalable and diverse archiving
- Improved community support
 - Running this infrastructure costs money!
 - We hugely appreciate our generous supporters
 - <https://www.routeviews.org/routeviews/index.php/supporters/>
- Your suggestions are very welcome! 

UNIVERSITY OF OREGON

For network operators & researchers

USING ROUTEIEWS

UNIVERSITY OF OREGON

Using RouteViews

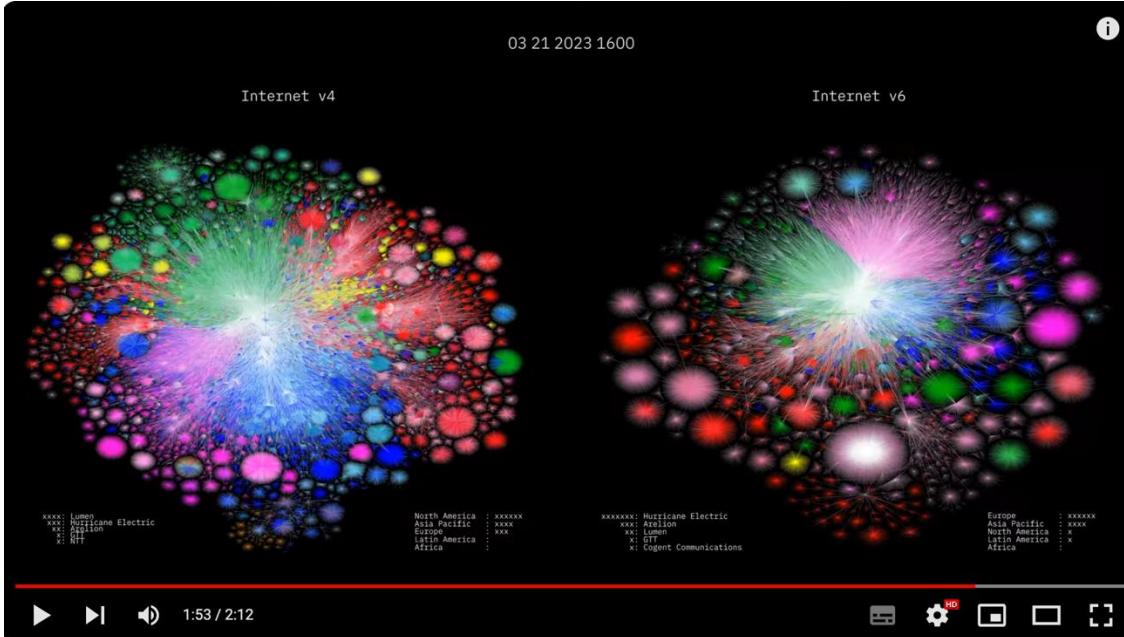

- Network Operators use the live data to analyse how their routes appear on the Global Routing System
- Researchers use the 27-year-old data archive to study trends, route hijacks, and changes such as:
 - Origin change
 - Next-hop change
 - New prefix / more specifics
 - New neighbours
 - Operator ASN appearing in a new transit path
 - Bogons

UNIVERSITY OF OREGON

Consumers of RouteViews data

If you use RouteViews data for your products or services:

- Please acknowledge the source!
 - Your product or service likely would not work without our data!
- Please do *NOT* send your customers of your products or services to us for technical support:
 - We simply collect what is seen in the global routing table
 - We cannot fix mistakes made by network operators
 - We cannot fix bugs in BGP implementations
 - We cannot remove BGP announcements we receive
 - We cannot change what is seen in the global routing table

UNIVERSITY OF OREGON

For Peering Coordinators

PEERING WITH ROUTE VIEWS

Peering with RouteViews

- RouteViews has an Open peering policy
 - PeeringDB: <https://www.peeringdb.com/asn/6447>
- We require all peers to have a PeeringDB entry
 - Our tools build peering options (for IXP based collectors) and configurations from PeeringDB
- Peering:
 - Over IPv4 (for IPv4 prefixes) and IPv6 (for IPv6 prefixes)
 - We want to receive the entire BGP table (if operationally possible)
 - Please do not use “add-path” or send us bogon routes
 - We do not send you any prefixes (please don’t ask)

UNIVERSITY OF OREGON

Peering with RouteViews

- Presence in multiple IXP locations?
 - It can be interesting to peer; we will assess based on available capacity
- Will we peer with everyone?
 - If you peer with IXP Route Servers, you will be peering with AS6447
 - We are more selective about bi-lateral and multi-hop peerings (we would like to receive your view of the Global Routing Table)
 - We are interested in new, interesting, diverse peers all around the world

UNIVERSITY OF OREGON

For potential hosts of collectors

HOSTING ROUTEIEWS

Hosting RouteViews

- RouteViews is interested in new locations
 - Especially in regions or economies we have no collector
 - Where there are IXPs with large numbers of peers (>100)
- Hosting a RouteViews collector
 - Hosts can be IXPs themselves
 - Hosts can be members of IXPs
 - Hosts sponsor the IXP port and the (~10Mbps) transit required
 - Hosts sponsor the VM needed for the collector
 - Physical hardware is less preferred due to being harder to manage
 - VMs sometimes may not be possible due to operational requirements

UNIVERSITY OF OREGON

Collector Specifications

- Virtual Machine:
 - 16GB RAM min (prefer 32GB)
 - 100GB disk
 - 4 vCPUs
 - 1 transit interface (management and public CLI access, low traffic)
 - 1 peering interface on the IX
- Physical Hardware:
 - 32GB – 64GB RAM
 - 400GB – 1TB SSD
 - 4+ CPUs
 - Ethernet port for transit interface (1Gbps is enough)
 - Ethernet port for IX peering (10Gbps is the standard now)

UNIVERSITY OF OREGON

Collector Software

- Ubuntu 24.04 is RouteViews standard OS
 - We require a minimal Ubuntu Server install
 - Our deployment scripts do the rest
- Routing daemon we install is FRR
 - MRT¹ used for BGP RIBs (archived every 2 hours) and BGP updates (archived every 15 minutes)

¹ Multi-Threaded Routing Toolkit: <https://datatracker.ietf.org/doc/html/rfc6396>

Collector Host

- Acknowledged on RouteViews website as a sponsor
- Contact details kept up to date with RouteViews team
 - An up-to-date PeeringDB entry helps 😊

How you can help

SUPPORTING ROUTE VIEWS

Supporting RouteViews

- The project was started in 1995 because network operators wished to see what their BGP announcements looked like from an external viewpoint
 - Thousands of network operators & researchers all around the world now rely on RouteViews
 - Many everyday tools we all rely on use RouteViews data
 - Many commercial products and services rely on RouteViews data

UNIVERSITY OF OREGON

Supporting RouteViews

Please consider supporting RouteViews:

- By peering with one of our collectors
- By publicly acknowledging the value of the information we have collected
- If your product or service is commercially successful, we look forward to receiving your support to keep your product or service that way!
- In any other way that helps keep this community service going

Thank you!
